

# i.d. cards

● Our cards work with the latest debit, security, and point of purchase software by incorporating bar-coding, magnetic strip, chip, and proximity technologies as needed. All of our programs include card design and consultation and we offer 3 program options from which to choose:

**Program #1 On-Site:** This proven service includes on-site capture of all images and same day card delivery. Our trained technicians and up date digital capture stations permit us to efficiently create beautiful, durable, custom designed cards for your entire school population eliminating the hassles associated with doing the work in-house.

**Program #2 Use our School Portraits:** Choose us as your school portrait vendor and we will use each person's portrait in your schools custom I.D. Card design. We provide the portrait, quick turnaround, and aggressive pricing.

**Program #3 Use Your Own Images:** Simply provide us with your digital images and we will place them into a card of your design. We provide rapid delivery at a low per card cost.

Our cards are tamper proof, require no lamination, and are made to last. We safely store card designs, and offer security ideas including the creation of separate card designs for students and faculty.

Lost cards are easily replaced. For all of our card programs we store each image and related data for quick retrieval. Simply e-mail your lost card request by 4:00 PM any weekday and a replacement will be sent the same day.

The images we capture can be used to create a "Quickbook" developed so administrators, faculty, and security personnel can recognize students at the start of the school year. We also offer Images on CD in a variety of formats for uploading to your in house database system

Of course these images can also be used in combination with our portrait services, or start to finish facebook program where we take the hassle of creating a picture directory out of your hands and get the job done with high quality printing and on time delivery.

As you can see, whatever your imaging and security needs, we have the solution, and if you don't see what you need let us know and a solution will be found!
